

2022 Pavement Condition Survey

What is the PCI?

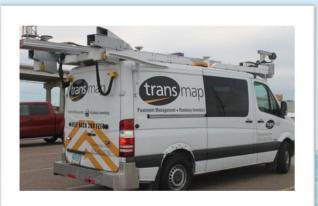

- PCI = Pavement Condition Index
- A number between o(worst) and 100(best)
- Indicates overall condition of pavement for specific street segment
- Based on Pavement Distress Analysis: Cracking, depression, rutting, shoulder drop off, patching, severity and other ASTM D6433 standards for roadways, as well as ride quality

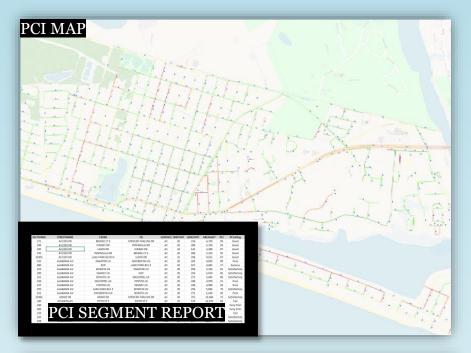

How is the information gathered?

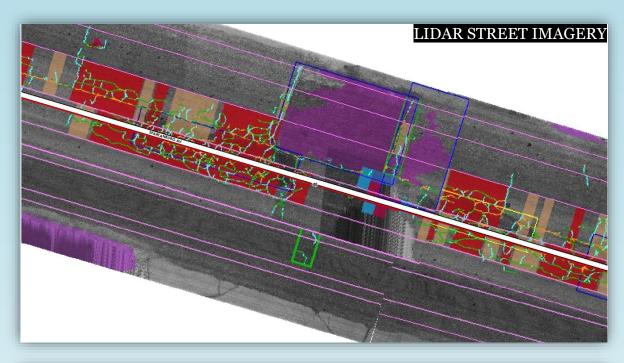

- Services provided by Transmap
- Survey conducted via Transmap's ON-SIGHT vehicle
- Laser Crack Measurement System (LCMS) uses laser line projectors, high speed cameras, and advanced optics to create high resolution 3D profiles of road.
- Both travel lanes are driven and 100% of roadway is captured
- All information is entered into MicroPAVER to generate a PCI for each segment
- QA/QC conducted through "boots on ground" for verification of distresses and severity

What is Provided?

GIS Data for Town Assets
